INTRODUCTION

PURPOSE AND PLAN SUMMARY

The Pleasant Valley/North Carver (PV/NC) Comprehensive Plan is a vision and integrated land use and transportation plan for a 2700-acre addition to Happy Valley. The purposes of this report are to:

1. Summarize the recommendations from the 2018-2020 PV/NC planning process, with updates added in 2021
2. Serve as an adopted appendix to the Happy Valley Comprehensive Plan

The PV/NC process brought together City representatives, property owners, area residents, partnering governments and other stakeholders to guide the development of the plan and craft its recommendations. These groups worked together to successfully:

- Establish the **vision and guiding principles** for the PV/NC plan;
- Map and evaluate **natural resources**, the area's **unique landscape** setting and topography, land use, history and other existing conditions;
- Project land needs for **housing, employment, parks**, and other key land uses;
- Prepare land use concepts and mapped designations for **new residential neighborhoods and employment districts**;
- Define **two new mixed-use districts**: the Pleasant Valley Neighborhood Center and Carver Riverfront District;
- Prepare **transportation plans** (streets, bikeways, and trails) that are integrated with the future land use
- Coordinate the PV/NC plan with **water, sanitary sewer and storm water** master planning by

Sunrise Water Authority and Clackamas County Water and Environmental Services

- **Develop Comprehensive Plan policies** to guide future development and plan implementation
- **Prepare updates** to the Happy Valley Transportation System Plan and Parks and Recreation Master Plan

PROCESS

Planning Milestones leading to the PV/NC Comprehensive Plan

The major steps leading to the PV/NC Comprehensive Plan included:

- **2002** – Expansion of the Urban Growth Boundary to include approximately 10,000 acres reaching east to Damascus.
- **2004 to 2006** – Preparation of the Damascus-Boring Concept Plan
- **2004** – Incorporation of the City of Damascus
- **2009** - Adoption of the East Happy Valley Comprehensive Plan by the City of Happy Valley
- **2015 to 2018** - Property-owner initiated annexations of approximately 1,000 acres within the study area
- **2016 to 2019** – Legislative and judicial actions related to the disincorporation of the City of Damascus (ongoing)
- **2017** – Award of a Metro planning grant for the PV/NC Comprehensive Plan

Multiple planning studies in the vicinity were conducted during the timeline summarized above, including: the Pleasant Valley Concept Plan and Plan District; comprehensive planning studies and proposals by the City of Damascus; planning for the Rock Creek employment area; the East Happy Valley Comprehensive Plan; and the 172/190th Avenue Corridor Plan. All of these efforts were utilized in, and provided valuable insights to, the PV/NC Comprehensive Plan.

The 2018-2021 PV/NC Process

In 2018, the City of Happy Valley initiated the PV/NC process by completing a work plan and appointing two advisory committees: the PV/NC Community Advisory Committee (CAC) and Technical Advisory Committee (TAC). The 13-member CAC, representing a broad cross-section of community members and property owners, met eleven times between October 2018 and February 2020.

In addition to CAC meetings, the community-process included “pop-up” outreach events at area businesses, two community workshops (135 people attended), an online community workshop, two open houses and multiple information pieces provided through the Happy Valley News, two project videos, flyers, and the project web site. Project staff also provided briefings and updates to the Happy Valley Planning Commission and City Council throughout the project.

The project was paused for much of 2020 due to the COVID-19 pandemic. Reconvening in Summer 2021, the CAC met two additional times before a final round of outreach and adoption hearings.

The adoption of the PV/NC Comprehensive Plan is a major milestone for the continued growth of Happy Valley. But it is only the beginning. The area will develop incrementally as infrastructure becomes available, property owners decide to apply for land use permits, and follow-up planning is accomplished. If these pre-requisites occur, and the area grows at the rate close to forecast population growth for the area, it is estimated the PV/NC plan provides at least 25 years of land supply for the continued growth of Happy Valley.

VISION AND GUIDING PRINCIPLES

VISION STATEMENT

The vision and guiding principles describe the long range outcomes intended for Pleasant Valley and North Carver. They capture the visioning discussions held by the advisory committees in the fall of 2018, and were used to guide the development of the plan.

The Pleasant Valley/North Carver area is an integral part of the growing Happy Valley community, and a natural extension of East Happy Valley.

The natural beauty of the landscape is embraced, the ecological health of the area is preserved and enhanced through environmental stewardship, and nature is made part of every neighborhood.

The Carver riverfront has been transformed to include great public access and unique destinations.

The area is comprised of a network of walkable neighborhoods, vibrant mixed-use centers, and thriving employment areas.

The area is supported by a resilient and safe network of streets, transit service, infrastructure, high-quality schools, and attractive parks and trails.

GUIDING PRINCIPLES

Promote a Sense of Community. All development is planned and design to create a strong identity and sense of community in Pleasant Valley and North Carver.

Preserve and Celebrate Nature. Nature is protected, celebrated, and integrated into the community. Stream and habitat corridors are preserved and enhanced to ensure they can provide critical ecological functions. People can experience nature up-close through a network of parks and trails. People can appreciate nature from afar, in everyday situations, through views of rolling hills and forested buttes.

Form Walkable, Welcoming Neighborhoods. Neighborhoods are more than a collection of housing. Neighborhoods feel and function like villages: welcoming communities that make room for people of all ages, abilities, and life experiences. Within each neighborhood, housing options include family-sized homes, compact cottages, and livable townhomes and apartments where appropriate. Streets and blocks are designed for walking and local shops and services are within walking distance.

Create Vibrant, Mixed-Use Centers. People gather in neighborhood centers to shop, play, and celebrate as a community. Mixed-use buildings allow people to live in these centers, ensuring that streets are alive with activity both during the day and in the evenings. The centers are destinations because they are built around special places, such as the waterfront of the Clackamas River or the confluence of important streets.

Craft Distinctive Places. People perceive the communities in the plan area as distinctive places. Homes and buildings are designed to be varied and interesting. Gateways into the area and individual neighborhoods are marked with distinctive public art or monuments. Unique features are designed into corridors and centers to reinforce a sense of place.

Attract Local Jobs and Businesses. Residents have opportunities to live and work in the same community. Local jobs are available to people with a range of backgrounds and skills, and all pay a living wage. Businesses are attracted by unique advantages of locating in the area and reinforce the development of industry clusters.

Design a Resilient, Connected Transportation System. A robust network of streets and transit routes allow people to move efficiently in, out, and across the area. Streets are designed to both manage traffic flow and encourage walking, biking, and riding transit. Transportation infrastructure is built prior to or concurrent with development.

Ensure Regional Fit. The plan area is integrated with the regional transportation system, land use patterns, and public facilities network. The plan area is viewed both as a distinct, individual place and a part of a larger system of neighboring cities and rural areas.

Plan for Fiscal Health. The plan can be implemented because it addresses fiscal realities. Service providers—including transportation, sewer, water, stormwater, parks, schools, and parks—can build infrastructure to support development because funding mechanisms are aligned with needs and costs.

EXISTING CONDITIONS AND LAND NEEDS

1911-1914 USGS Topographic Maps depicting the study area

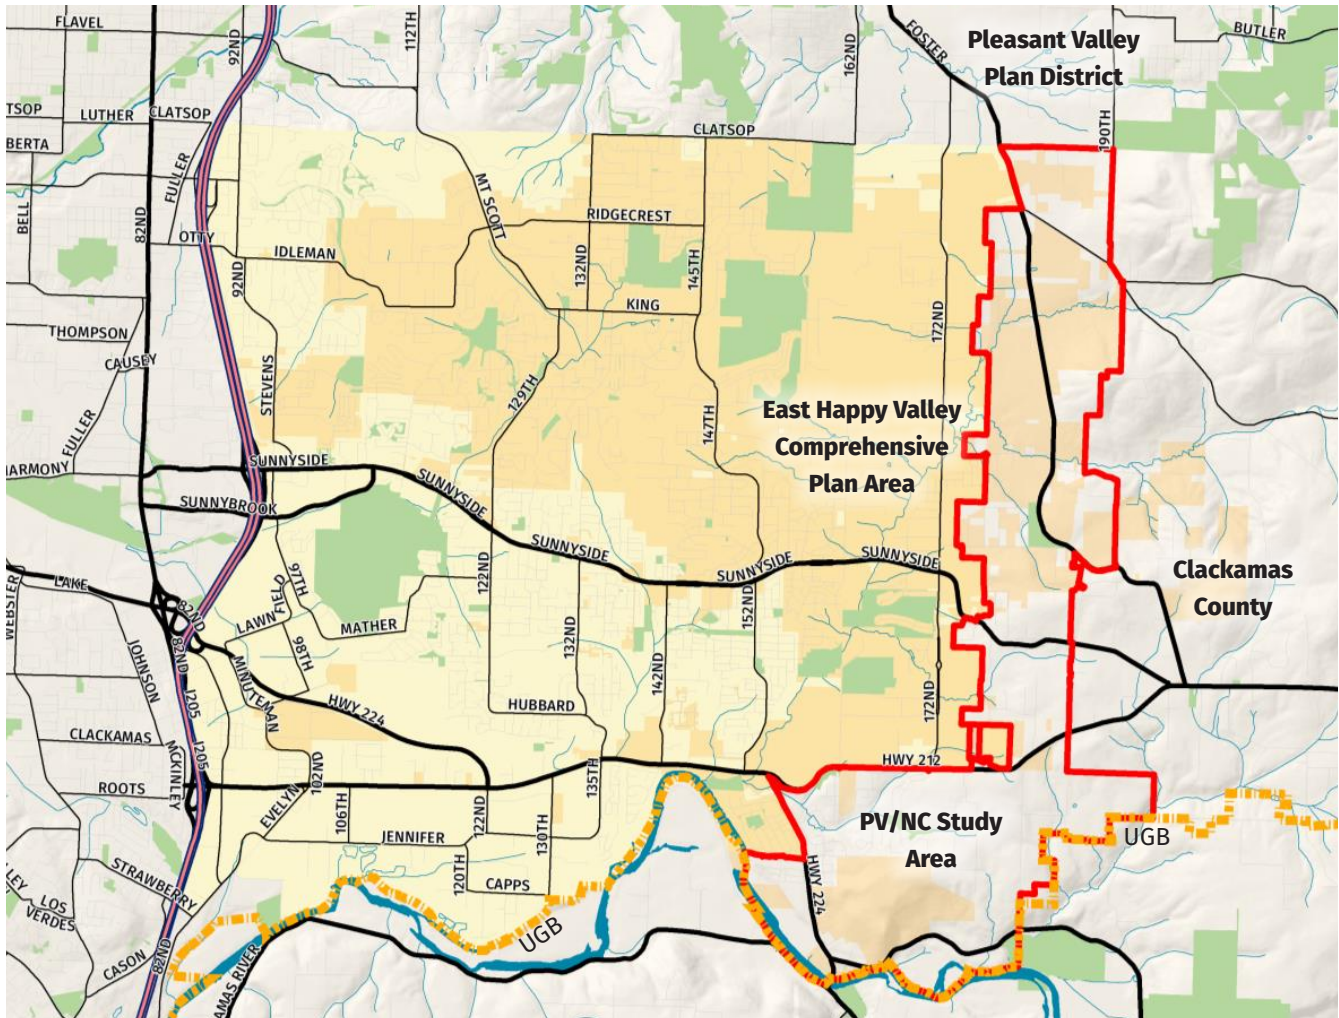

CONTEXT

Regional Context. The Pleasant Valley/North Carver area is at the eastern edge of Happy Valley, on the east side of the Portland Metro region. It is within the Metro Urban Growth Boundary (UGB), bounded on the west by the City of Happy Valley, on the north by the City of Gresham, and on the south by the Clackamas River and rural reserves.

Local Planning Context. The 2,700-acre PV/NC Carver Comprehensive Plan is the next logical step in approximately 20 years of planning for the area. It is an eastward and southerly extension of the East Happy Valley Comprehensive Plan, which was

adopted by the City in 2009. Physically, the two comprehensive plan areas are part of the same landscape and the PV/NC study area is the eastern and southern portion of it. Other local planning efforts that have informed the PV/NC Plan include: Gresham’s Pleasant Valley Plan District to the north; the 172nd Avenue/190th Drive Corridor Management Plan; the Happy Valley Parks & Recreation Master Plan; the Clackamas County Transportation System Plan; planning studies conducted for the former City of Damascus; and, utility master plans by Sunrise Water Authority and Clackamas Water Environment Services.

Figure 1. Plan Area Context

STUDY AREA SUMMARY

As of 2020, the project area contains...

2,705 Acres

1,685 Properties

1,735 Households (approx.)

3,390 residents

11,400 feet of riverfront

1 elementary school

1.4 acres of public parks

Highest elevation: **~770'**

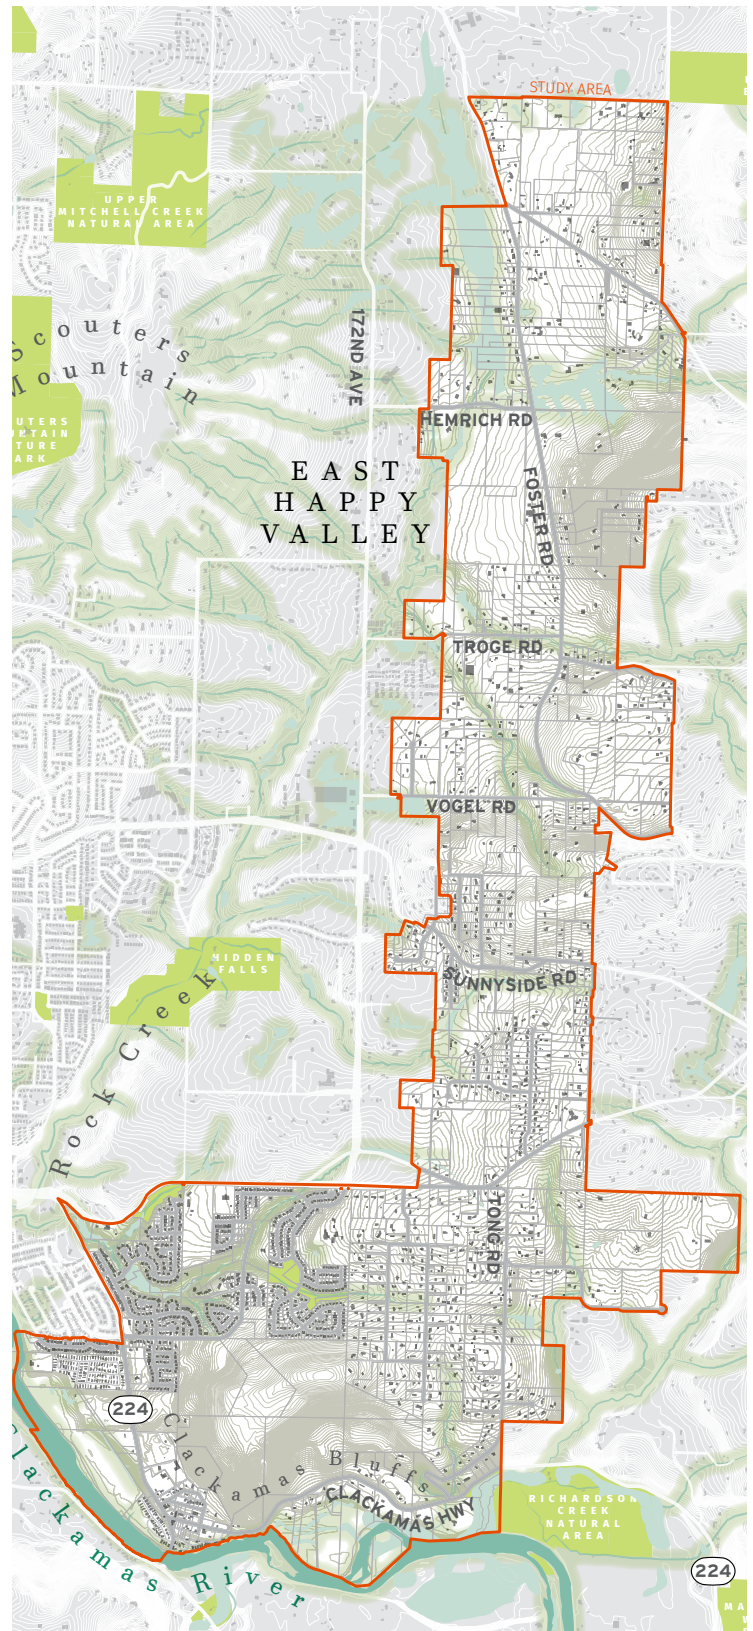

Lowest elevation: **~75'**

Average parcel size: **1.6 Acres**

Largest ownership: **207 Acres**

Land with Steep Slopes,
Wetlands, or Other Constraints:
802 Acres

Land annexed to the City of
Happy Valley: **1,000 acres**

LANDSCAPE AND NATURAL FEATURES

The Pleasant Valley portion of the PV/NC study area is known for its beautiful butte-and-valley landscape. Rock Creek flows through Pleasant Valley, with numerous tributaries branching off and forming greenspaces that are wildlife corridors and the location of major tree groves. Scouter's Mountain and the Butler Buttes frame the valley with forested hillsides that are the upper reaches of Rock Creek's local watershed. The buttes also provide a striking visual backdrop to the valley. One of the tributaries of Rock Creek (north of Winston Road) extends all the way east to Sunshine Valley near 222nd Avenue. See Figure 33.

Happy Valley has Comprehensive Plan policies and code standards that regulate development in and near stream corridors. The primary tool is the City's Natural Resources Overlay Zone (NROZ). As applied in the local development review process, the NROZ is intended to: protect and improve the natural resource functions and values that contribute to water quality and fish and wildlife habitat in urban streamside areas; protect and improve upland areas and habitat connectivity; and, allow and encourage nature-friendly development. This set of regulations will be used to help implement the PV/NC Plan.

Most of the North Carver area drains south to Richardson Creek and the Clackamas River. In this portion of the study area, the green spaces and riparian habitats are more edge conditions than the connective greenspaces in Pleasant Valley.

Figure 2. Pleasant Valley Landscape Study (Looking North)

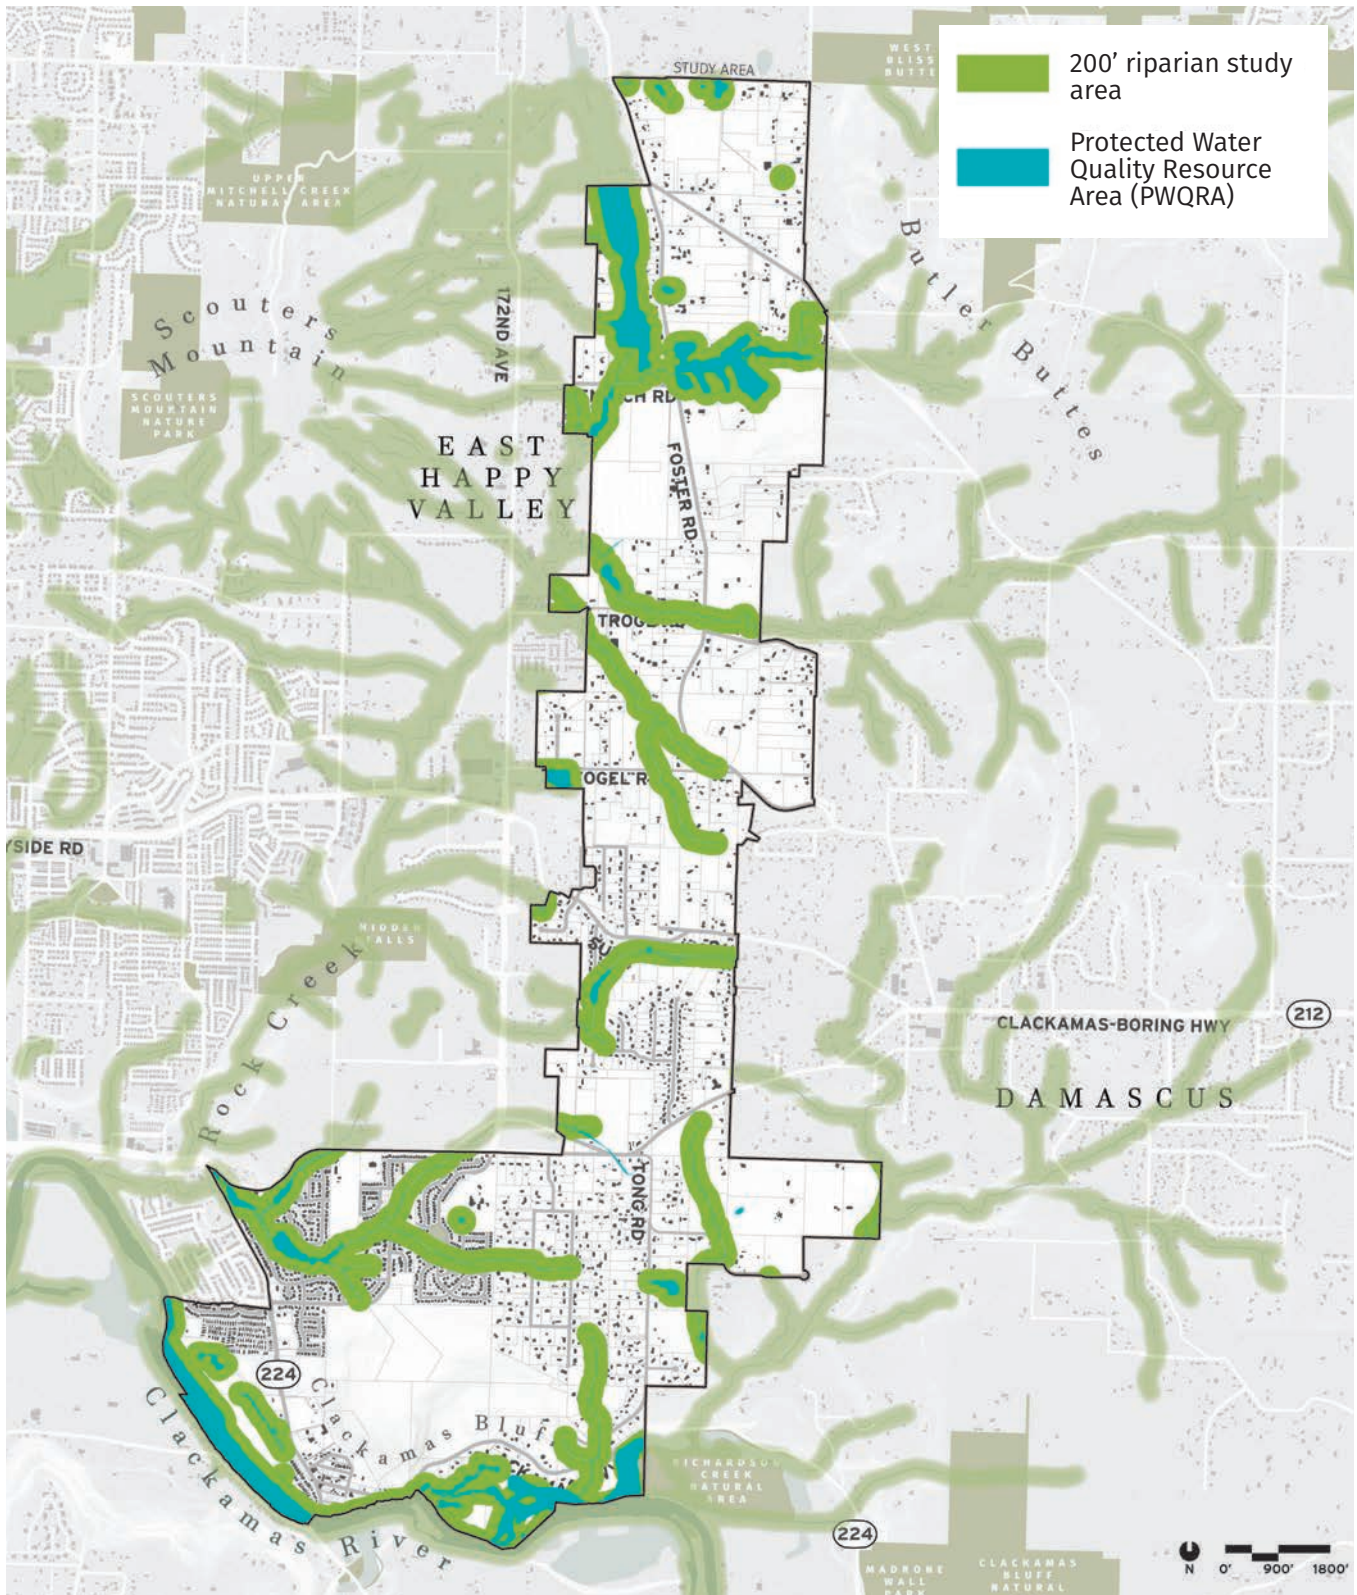

Figure 3. Riparian and Open Space Areas

SLOPES

A slope analysis was prepared to evaluate buildable lands and study how to integrate future urban land uses into the landscape. Figure 5 clearly shows the primary buttes – the Butler Ridge buttes and Scouter’s Mountain, with Pleasant Valley and other valley environs between them. The Carver Bluffs area above the community of Carver are also readily apparent, as are the stream-side slopes of Rock Creek, Richardson Creek and their tributaries. This beautiful landscape in Pleasant Valley and North Carver are a key part of the identity of the area, and, and amenity to be integrated into its urban future.

The City of Happy Valley has policies and code standards to regulate development on steep slopes. The primary tool is the City’s steep slopes development overlay (SSDO). The SSDO defines “conservation slopes” as areas of 25% and greater slope – these are areas where the hillside is protected and permitted development is very limited. The code also defines “transition slopes” as areas of 15-25% slope, where there is more flexibility, but permitted low density development must meet site design criteria. Overall, these regulations protect steeper areas because the City recognizes that they:

1. Are generally more difficult and expensive to serve with urban infrastructure as compared to less steep lands;
2. Provide wildlife habitat, tree canopy, and other environmental benefits;
3. Are located at the headwaters of watersheds that provide clean drinking water to downstream users, including Happy Valley residents;
4. Contribute to the scenic landscape of Happy Valley which is a strong part of the City’s identity and livability;
5. Are often adjacent to regulated natural resource areas and/or public green spaces; and
6. Can, if developed, cause harm to persons and/or structures via stormwater runoff, landslide, mudslide, tree windthrow, and other natural actions that may pose a hazard to the public health, safety and welfare.

The SSDO’s purposes, summarized above, are consistent with recommendations in the PV/NC Plan.

Figure 4. Carver Landscape Study (Looking East)

Figure 5. Steep Slopes

BUILDABLE LANDS

The project team prepared a Buildable Lands Inventory (BLI) for the project area to document potential buildable urban land supply for the project area. This inventory was used to plan for future land uses, estimate growth capacity, and support infrastructure analysis. Buildable lands are calculated by identifying and addressing developed parcels, environmental constraints, and other potential impacts to developability within the area.

Environmental Constraints

As described in the previous section, the City of Happy Valley regulates development on steep slopes, within the floodway and Special Flood Hazard Area, near wetlands and identified Habitat Conservation Areas (HCA), and near Protected Water Quality Resources (also known as Metro Title 3 areas). These constraints were removed from the estimated capacity of parcels in the area.

Existing Development

The PV/NC area includes several existing subdivisions and legacy neighborhoods in the southern portion of the study area. These neighborhoods are considered developed, though they may experience infill and redevelopment over time as the area builds out. Such neighborhoods may have “Covenants, Conditions, and Restrictions” (CCRs) that limit the type or amount of infill development.

Key Findings

- 2,705 gross acres** in the study area
- 827 parcels** classified as either Vacant or Partially Vacant (out of 1,681 total)
- 1,492 acres** of unconstrained land in buildable categories (out of 1,605 total)
- 1,044 net acres** of buildable land, after 30% reduction for public facilities

Figure 6. Buildable Lands Inventory Map

HISTORIC RESOURCES

In 1984, Clackamas County completed a countywide cultural resource inventory that was intended to provide documentation of all significant cultural resources in the county. Expanded survey information regarding the identified properties was added to the inventory in 1989-90. Through this inventory, 36 historically significant properties were identified in the Happy Valley/Sunnyside/Damascus area, 6 of which are located within the Pleasant Valley/North Carver Comprehensive Plan Area. Two of these six properties – Carver School and the John Byers Farm – are designated Clackamas County Historic Landmarks.

In 2007, additional historic resource survey work was conducted in the Plan Area by Archaeological Investigations Northwest (AINW) to fulfill federal requirements related to proposed roadway expansion and upgrades between I-205 and Rock Creek Junction. AINW identified 71 aboveground properties within the highway project area that were 45 years of age or older, including 8 located within the Pleasant Valley/North Carver Comprehensive Plan Area, and 9 located outside of but adjacent to the Plan Area. AINW did not find any of these 17 properties to be eligible for the National Register of Historic Places, generally due to loss of integrity and/or lack of architectural distinction.

HOUSING AND EMPLOYMENT NEEDS

Housing Trends and Projected Needs

Happy Valley is a rapidly growing area of the Portland Metro region. Population growth in Happy Valley far exceeds the rates for Clackamas County, the Tri-County Metro Region, and Oregon statewide growth rates. Happy Valley’s housing stock is predominantly single family detached, however, there is an increasing trend towards development of townhomes and apartments in recent years.

Home values in Happy Valley are stable and relatively high compared with similar markets in the Portland Metropolitan Area. Rental units have increased as a share of Happy Valley’s housing stock, moving from 5% of occupied housing units in the city in 2000 to 15% in 2016.

Based on Metro growth projections for the Pleasant Valley/North Carver Planning Area, a projected 4,361 additional housing units will be added in the area between 2015 and 2040. These housing units will take the form of single-family detached units on a variety of lot sizes, attached units such as townhomes and duplexes, small-scale multifamily units such as cottage clusters and courtyard apartments, and larger multifamily developments. The analysis of housing for the PV/NC Plan projected housing by type, as summarized in Figure 8. The housing types are approximately 50% multifamily and 50% single family, as required by the Metropolitan Housing Rule (OAR 660-007).

Figure 7. Happy Valley Population Growth

	2000	2010	2017	Change, 2000-2017
Happy Valley	4,519	14,330	19,985	342.2%
Clackamas County	338,391	376,780	413,000	22.0%
Tri County Region *	1,444,219	1,644,635	1,811,860	25.5%
Oregon	3,421,399	3,837,300	4,141,100	21.0%

Figure 8. Pleasant Valley/North Carver Residential Land Needs

Housing Type	Dwelling Units
Large Lot Single Family Detached	438
Standard Lot Single Family Detached	1,147
Small Lot Single Family Detached	592
Townhomes, Plexes	671
Apartments (5+ units per structure)	1,513
Total	4,361

Source: Pleasant Valley/North Carver HNA, Dec. 2018. Projected housing is based on “Scenario B” in the HNA.

Projected Employment Needs

As part of the Pleasant Valley/North Carver Comprehensive Plan process, the project team evaluated the employment land needs within the market area. The Economic Opportunities Analysis (EOA) projected land needs that are expected for PV/NC Plan area to address local, regional and state planning requirements. This analysis includes:

- Evaluation of current real estate trends in retail and office lands within the Portland Metro area as well as primary market areas for the Happy Valley and PV/NC Plan area.
- Evaluation of state and regional data which identifies projected growth patterns in employment, office, and retail development in Happy Valley and the surrounding area.
- Analysis of Census and local market data to identify further socioeconomic trends that define the Happy Valley area.
- Recommendations that help inform a market-supportable development program for employment land needs in the Happy Valley area over a long-term planning period.

The technical analysis was originally prepared in 2018 using available data at that time. Draft findings were subsequently discussed and refined during the planning process.

The analysis included several scenarios for forecasted employment growth. Scenario A reflected current market patterns within the Happy Valley area and resulted in the lowest amount of expected employment for the plan area. Scenarios B and C reflected the enhanced business attraction that would result from the completion of the Sunrise Expressway Phase 2. Scenario B reflects a mid-point between scenarios A and C, and Scenario C reflects an upper-limit of potential 20-year job growth. See Figure 9.

Discussion with the project’s advisory committees led to **Scenario B** as the preferred forecast for the plan. However, the advisory committees found it challenging to identify suitable locations for all the projected land needed. The resultant plan designations reflect an employment land supply between the Scenario A and B forecasts.

Figure 9. Pleasant Valley/North Carver Employment Land Needs

Land Use Classification	Scenario A	Scenario B	Scenario C
Commercial (retail, office, lodging)	23.7	27.2	39.5
General Industrial & Flex*	15.4	116.0	175.9
Public & Education (excl. open space & parks)	23.0	41.8	60.3
Total (unconstrained acres)	62.1	185.0	275.8

Source: Appendix B tables. *Note, Employment land need shown has been reduced by 17.6 acres to account for recent rezoning in study area west of 172nd Ave.

Visualization of Light Industrial Area incorporating multi-modal transportation, Happy Valey design, and stormwater management.

PLAN CONCEPTS & RECOMMENDATIONS

WALKABLE NEIGHBORHOODS

The PV/NC Comprehensive Plan has an overarching intent to create walkable neighborhoods. This concept, also a part of East Happy Valley, recognizes that each residential development is part of a larger community. The “walkable” quality of the planned PV/NC neighborhoods will result from ensuring they include: a connected street pattern; community destinations such as parks and schools; proximity and access to nature; and well-designed housing. The PV/NC area will have a wide variety of neighborhoods, tailored to their setting. Some neighborhoods will be in sloped areas, with larger lots and great views. New neighborhoods in valley locations will be an easy walk or bike ride to services, and will have a variety of single-family homes, duplexes, cottages, and townhomes. In all cases, the PV/NC neighborhoods are intended to have walkability be the foundation of their high quality of life.

The following principles were used to plan walkable neighborhoods for the PV/NC Plan.

- Organize new development to “fit the land” and create recognizable places with a distinct identity
- Tailor housing types, mix, and density to each neighborhood
- Create a robust network of connections between neighborhoods (including connections to East Happy Valley)
- Provide easy access to parks and schools for each neighborhood
- Provide walkable access to neighborhood green spaces, commercial centers, the river, and other destinations
- Celebrate and protect the natural areas and habitat within and between neighborhoods

Figure 10. Walkable Neighborhood Examples

**Walkable Neighborhood Example:

Happy Valley, OR

**Walkable Neighborhood Example:
Northwest Crossing**

Bend, OR

LAND USE CONCEPT

The Land Use Concept Figure 12 illustrates the generalized land use plan for the study area. This map was the initial level of detail used for discussions with the PV/NC advisory committees, and in community workshops.

The Land Use Concept applies Happy Valley's hierarchy of land use districts, which takes into account topography, natural resources, existing development, transportation, complementary land use relationships, and other considerations. The Land Use Concept map is a plan for:

- **Walkable neighborhoods.** The walkable neighborhood areas were used to shape boundaries of land use districts, helping to reinforce the natural and physical elements—stream corridors, major streets, buttes—that will contribute to the identify of each existing and future neighborhood.
- **Accommodation of projected employment and housing needs.** The map designates sufficient buildable land to each category of land need, including employment/industrial, commercial, and a range of residential lands that allow for a diverse set of housing types.
- **Higher densities near mixed use centers.** Higher density residential districts are located in close proximity to existing centers (near 172nd Avenue and Sunnyside Road) and two new mixed use centers (the Pleasant Valley Neighborhood Center and Carver Riverfront District). This pattern supports walkability, commercial vitality, and sets the stage for future transit service to these areas.
- **Lower densities in constrained areas.** Radiating out from mixed use centers, residential densities gradually decrease in areas that have steep slopes and sensitive environmental resources.
- **Transitions to, and incremental growth in, existing neighborhoods.** The Land Use Concept generally provides transitions of density between future neighborhoods and existing lower density areas. Within existing neighborhoods, incremental infill and redevelopment change is envisioned as infrastructure becomes available.

Figure 13 is the Land Use Concept with natural resources highlighted. This map illustrates two important aspects of the plan:

1. “The natural beauty of the landscape is embraced, the ecological health of the area is preserved and enhanced through environmental stewardship, and nature is made part of every neighborhood.” (PV/NC Vision statement).
2. The implementation of the City's existing policies, Natural Resource Overlay Zone, and Steep Slopes Development Overlay will regulate and guide development to minimize impacts to streams, wetlands, flood hazard areas, steep slopes and other regulated resource areas.

Figure 12. Land Use Concept

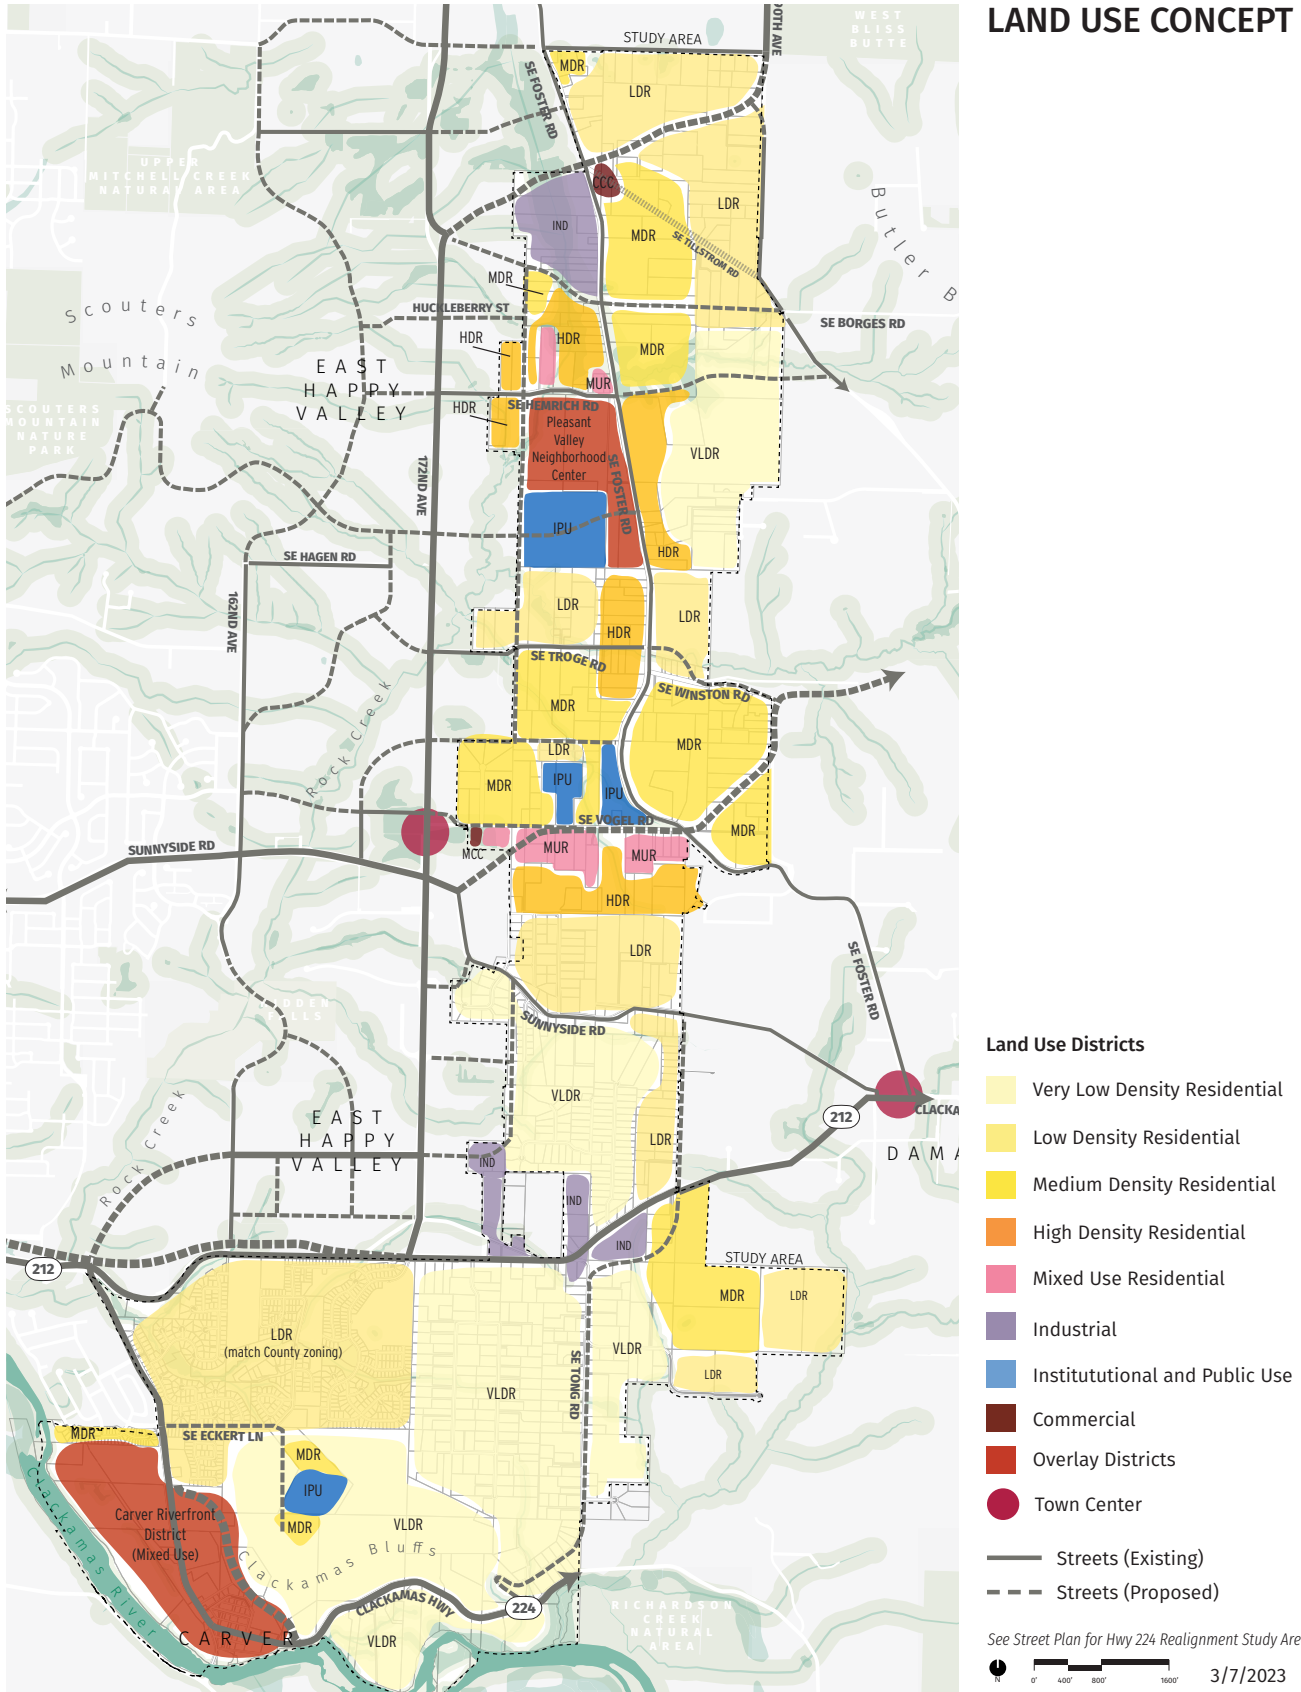

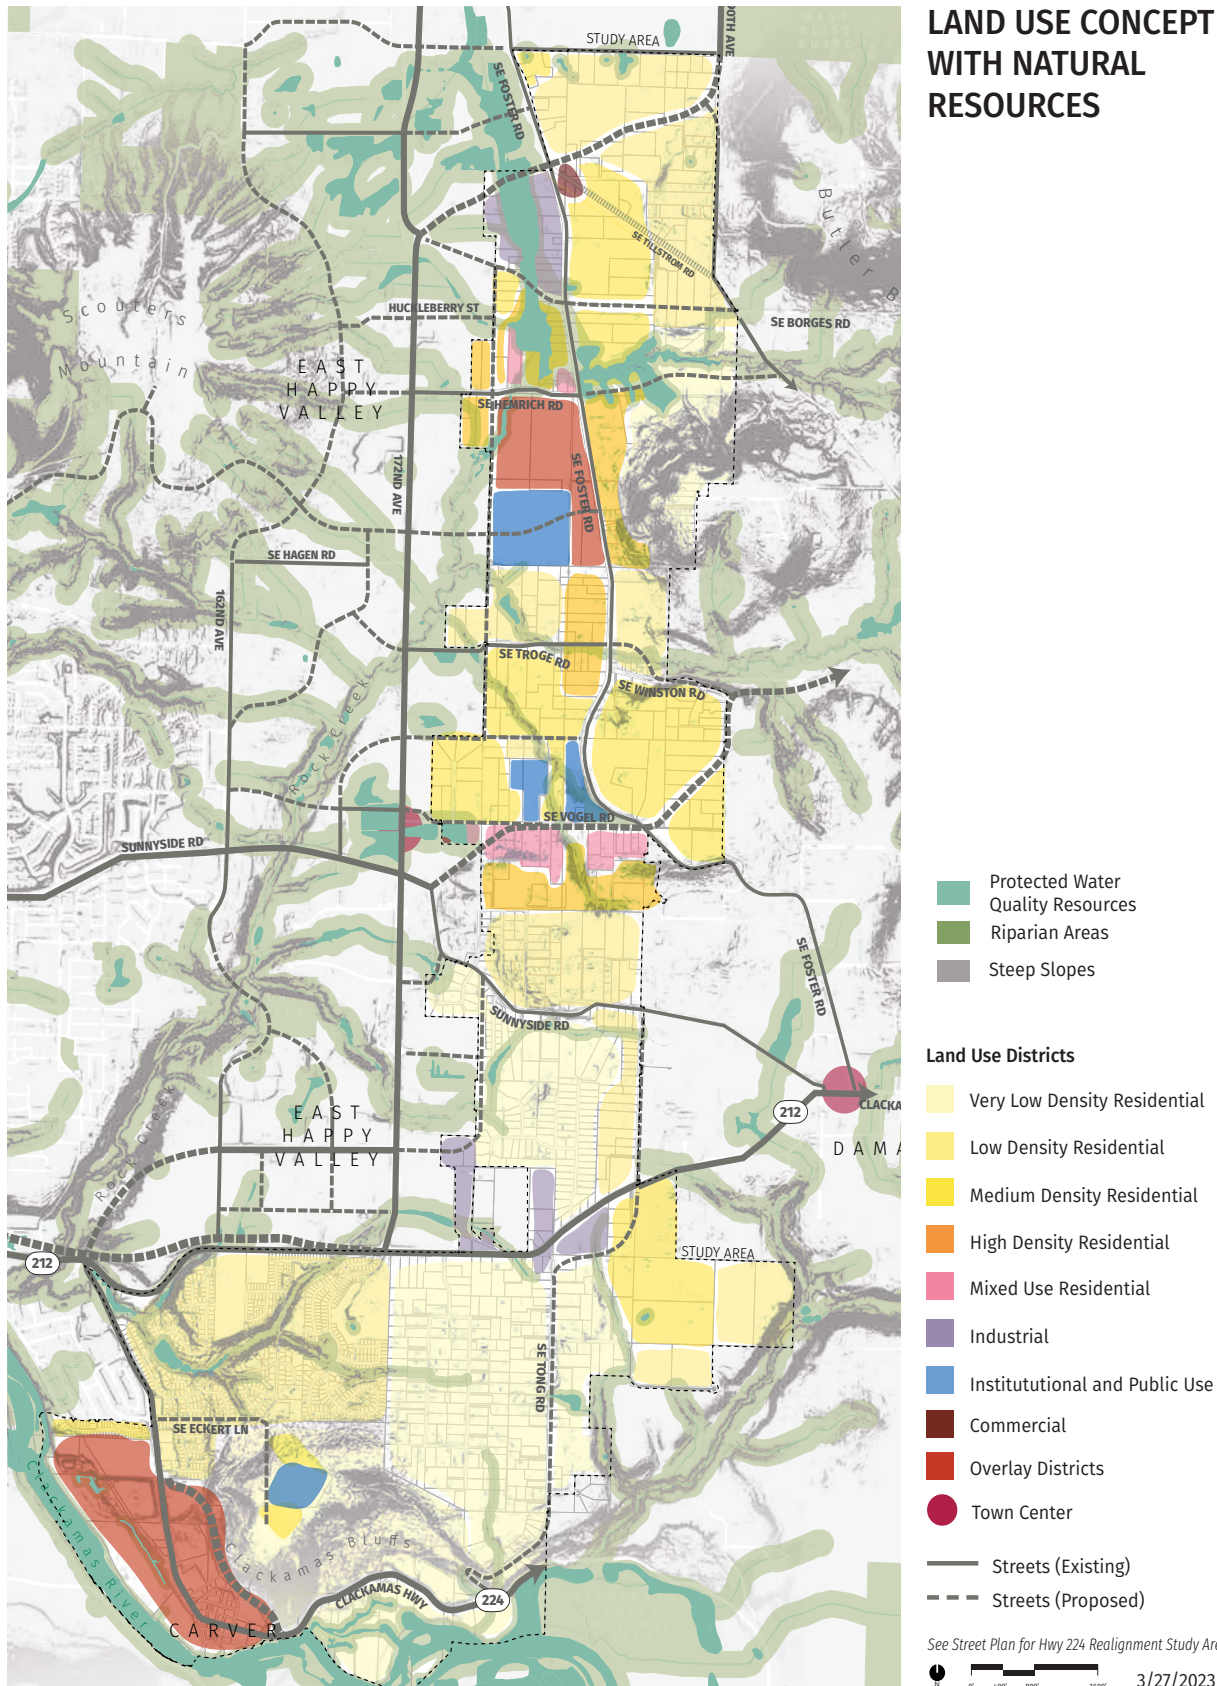

Figure 13. Land Use Concept with Environmental Constraints

PLEASANT VALLEY NEIGHBORHOOD CENTER

The PV/NC Plan includes a new master planned center to be located at the southwest quadrant of Hemrich Road and Foster Road. The Pleasant Valley Neighborhood Center will include:

- **A new Overlay Zone and Master Plan** that guides the land uses, urban design, public spaces, local circulation, transition between uses and neighboring areas, community amenities, and other elements needed for a successful Neighborhood Center.
- **A mix of low, medium, high density and mixed-use housing**, such as apartments, condominiums, townhomes, triplexes and duplexes, and cottage clusters, as well as single family homes. The master plan will include a well-designed configuration of different housing types and densities, to emphasize variety and housing choice.
- **Public parks.** A neighborhood park in the northern portion of the plan will support adjacent residential uses. A Community Park south of the future SE Scouter's Mountain Road

extension will provide a signature park serving much of Happy Valley.

- **A Neighborhood Center Key Street.** This street will be a highly pedestrian-oriented and walkable street, through the heart of the neighborhood center, implementing design guidelines described in the Overlay.
- **A network of walkable blocks**, with on-street parking and buildings oriented to streets with ground floors well-designed for pedestrian activity.
- **Safe, direct and convenient** street and pedestrian connections to facilitate easy access to and from adjacent neighborhoods.
- **Connections to the trail network.**
- **"Happy Valley Style"** architectural design.

Visualization of Pleasant Valley Neighborhood Center

CARVER RIVERFRONT DISTRICT

The City of Happy Valley has high aspirations for the future of Carver. The City's vision is to create a unique, mixed-use riverfront district that is enjoyed by local residents, the larger Happy Valley community, and the region.

The beauty of the Clackamas River and surrounding buttes, coupled with the historic significance of Carver, are the foundation for this vision. Over time, Carver will evolve to include excellent access to the river, a large riverfront park, trails, restaurants and other uses that face the river, and a historic core with retail shops and a public space. Mixed use buildings, apartments, and townhomes will create lively streets and provide an opportunity for many people to live near these amenities.

There are challenges – starting with the dominance of Highway 224 through the area and the congestion associated with the bridge and Hwy 224/Market Road junction. The City's solution is to realign Highway 224 to the north and east, allowing through-traffic to flow along the edge of the district and providing greater ease of pedestrian access to and from the riverfront. This proposed alignment is conceptual in nature, and will require coordination with ODOT and other stakeholders to determine its feasibility, costs, and potential funding mechanisms.

The images on the following pages summarize the Carver Riverfront District analyses and site studies that were prepared during the PV/NC process.

This site study illustrates a conceptual local street and walkable block pattern for the Carver Riverfront District. The north and south ends of the Hwy 224 realignment are conceptual - see Street Plan for Hwy 224 Realignment Study Area.

STREET NETWORK

The street plan for the Pleasant Valley/North Carver area is shown in Figure 17. Roadways with a functional classification of collector, arterial, and neighborhood street are shown—the local street network will be established over time by development. Development code standards will guide the creation of this fine-grained local street system to implement a connected, walkable series of neighborhoods.

North-south connectivity is provided by 172nd Avenue on the western edge of the study area and by the proposed Foster Parkway on the east (see Parkway recommendations, page 36). Major east-west connections include Cheldelin Road, Hemrich Road, Sunnyside/Vogel Roads, and OR Highway 212.

Collector streets are spaced approximately every one-half mile, as required by the Happy Valley Transportation System Plan. The Plan includes the eastward extension of Sunnyside Road to Vogel Road, which would eventually continue east to 222nd Avenue. This arterial corridor is needed to reduce reliance on OR Highway 212—it will be implemented over the very long-term growth of the area.

The Street Plan includes the recommended Hwy 224 Realignment Study Area. The vision of the plan is to realign Hwy 224 to the base of the Carver Bluff to reduce traffic through Carver, support the creation of the Carver Riverfront District, and reduce congestion at the Carver Junction Bridge. The Study Area designation is included in the Happy Valley Transportation System Plan.

The extension of Troge/Winston requires further analysis for where the roadway should turn south to balance impacts to natural resources, existing structures, and transportation requirements.

FOSTER PARKWAY

The alignment of Foster Road through the study area will serve as a greener, friendlier, and more human-scale north-south alternative to 172nd Avenue. The three-lane “parkway” cross-section of Foster Road serves as a minor arterial intended to move vehicles, bicycles, and pedestrians. The west side of the road will contain a multi-use path and significant tree plantings. In some areas, such as the Pleasant Valley Neighborhood Center, the cross section will include amenities such as street furniture and paved pedestrian area. Where feasible, a planted median and stormwater facilities will aid in stormwater management. Emergency parking areas will also be provided.

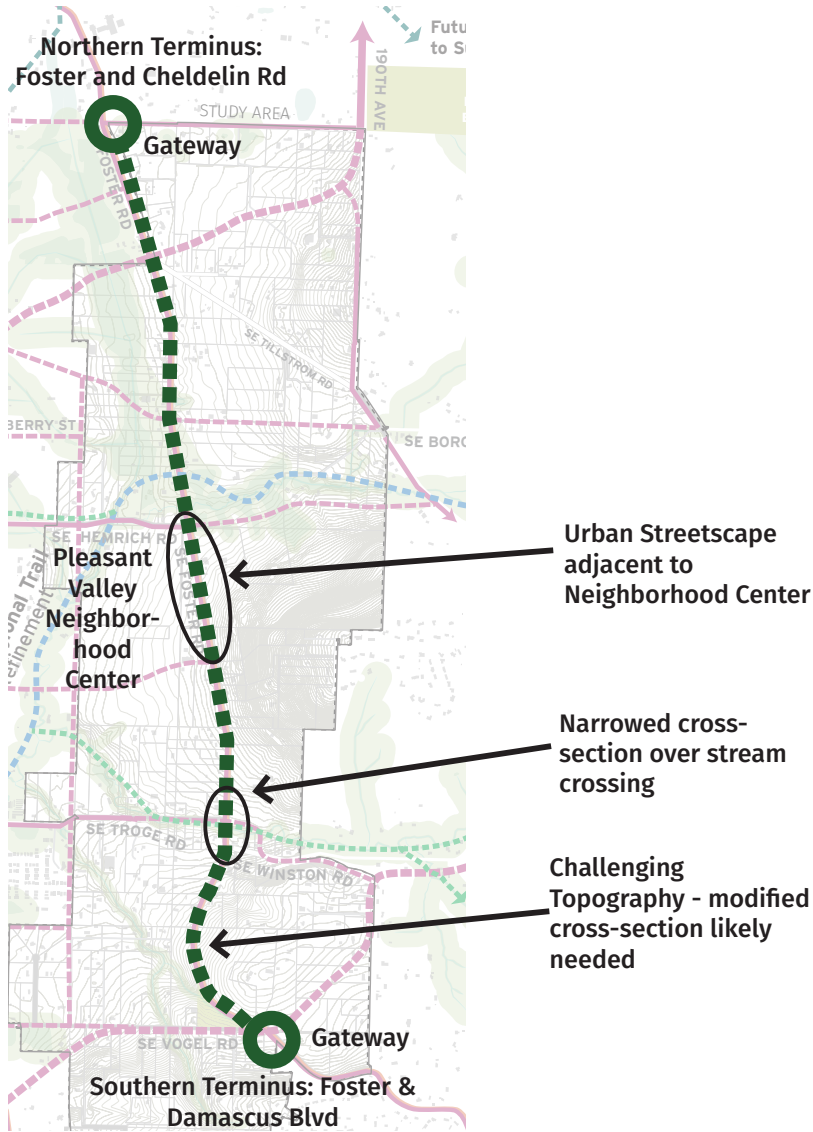

The following principles were used to prepare the concept plan for the Foster Road Parkway:

- Foster Road will be a multi-modal facility - safe, connected, and usable by all road users.
- The goal of the parkway design is to leverage Foster Road’s role as a gateway into the Pleasant Valley area and a special street that connects the neighborhoods in the area. The design will create a comfortable environment for walking, a safe facility for biking, and an aesthetically appealing experience for drivers. The parkway will also help to contribute to a unique identity for the Pleasant Valley area.
- The design of the Foster Road Parkway is intended to be flexible to meet local topographic situations and support adjacent land uses.

Figure 18. Recommended Foster Road Cross-Section (Looking North)

Figure 19. Foster Parkway Extents & Concepts

Visualization of Foster Parkway at the future Pleasant Valley Neighborhood Center

HIGHWAY 224 REALIGNMENT

During the planning process, the Community Advisory Committee envisioned a vibrant, mixed-use district for the Carver Riverfront area, complete with a signature riverfront park, walkable block pattern, and direct pedestrian connections to the river. The current location of OR 224 through Carver presents a barrier to this vision. A concept was developed to realign the highway to the north and east in order to lower traffic volumes at the Carver Junction and improve operations and multimodal safety at the OR 224/Market Road intersection.

The first step towards implementing the OR 224 realignment concept will be to conduct further study as described in the Transportation System Plan (see page 8-30) and shown on the Motor Vehicle Master Plan (see Figure 8-12). The study will evaluate potential benefits and impacts of realigning the highway with a focus on future intersection operations and safety. The study would determine the preferred highway alignment and connections to the surrounding street network with consideration of topographic constraints, standards, and costs. The study will be conducted in coordination with local agencies including ODOT, Clackamas County, and City of Happy Valley.

Figure 20. Site Study of Hwy 224 Realignment and Local Carver Street Network

BIKEWAYS AND TRAILS NETWORK

Figure 21. Trail and Bikeway System

The Pleasant Valley/North Carver area is planned to include a robust trail network, which will highlight the natural amenities of the area and connect to the significant regional trail system. The area's many creeks and drainages provide great corridors for off-street trails. If properly designed and maintained, these trail systems can also serve as wildlife corridors and natural habitat areas.

The Kelley Creek corridor lies to the north of the area, with future connections to Powell Butte, the Springwater Corridor, and the Butler Creek corridor. The Butler Buttes Regional Trail connects to the Power Line Corridor Trail and the Kelly Creek Trail System to the north.

In addition to a network of trails, the roadways within the Pleasant Valley/North Carver area will provide connectivity for pedestrians and bicycle travel.

PARKS PLAN

Parks and open space are the foundation of a healthy recreation system and provide opportunities for residents of all ages to meet, play, grow, and thrive. There are few existing, developed parks in the PV/NC area, but some open spaces are owned by local governments or Metro.

A connected system of parks and open space are a priority of this plan. There is a current need for 21.5 acres of developed parkland, which is projected to increase to 91.2 acres by 2040. If each community park ranges in size from 20-30 acres, depending on desired recreational needs, at least one new community park site should be developed and acquired in the near future. By 2040, additional community parks should be provided to serve the PV/NC study area. The PV/NC Parks Concept designates two potential community parks. The northern community park will be located near the Pleasant Valley Neighborhood Center, to take advantage of the area's flat land, planned mixed use and higher density development, and transportation options. The southern community park will be a new riverfront park in the Carver Riverfront District, capitalizing on the unique and scenic qualities of the Clackamas River and Carver area.

The Parks Concept also includes eleven neighborhood parks. These parks are primarily “walk-to and bike-to” facilities serving the planned neighborhoods around them. They should be located where there is convenient access, especially by foot, and central to households within ¼ to ½ mile. Wherever parks can be located adjacent to natural resources and trails, that should be done. The City supports the co-location of parks, stormwater facilities, trails, and open spaces.

Figure 22 shows the approximate center of “target acquisition areas” for new community and neighborhood parks. This map is conceptual and not intended to denote specific sites for parks.

As Happy Valley explores acquisition targets for parklands, some consideration should be directed to the 14-acre Vogel Road open space currently owned by NCPRD and the intervening parcel between this site and the school district property to the west.

Neighborhood Park Examples

1.5-5 acres in size

8-11 throughout the PV/NC area

Community Park Examples

20-30 acres in size.

1-3 to serve the plan area

Visualization of recreation facilities co-located with natural areas and stormwater features

COMPREHENSIVE PLAN

ZONING DESIGNATIONS

Land uses in the Pleasant Valley/North Carver area will ultimately be determined by zoning designations applied to specific parcels. The recommended land use plan shown in Figure 12, which identifies the appropriate locations for various types of residential and employment land in the study area, is further refined by the proposed zoning map in Figure 23. The zones proposed in the Pleasant Valley/North Carver Area are as follows:

Residential Zones

- R-20: Residential – 20,000 sq. ft. per dwelling
- R-15, R-10, R-8.5, R-7, R-5: Residential – (Example: R-7 is 7,000 sq. ft. per dwelling)
- MUR-S: Mixed Use Residential – Single-Family (minimum 6 du/acre)
- SFA: Single-Family Attached Residential – (10-15 du/acre)
- MUR-A: Mixed Use Residential – Attached (10-15 du/acre)
- MUR-M1: Mixed Use Residential (15-24 du/acre)
- MUR-M2: Mixed Use Residential (25-34 du/acre)
- MUR-X: Mixed Use Residential Mixed Buildings (24 du/acre average in Carver Riverfront District)

Employment Zones

- EC: Employment Center
- IC: Industrial Campus
- MUC: Mixed Use Commercial Center
- MUE: Mixed Use Employment
- IPU: Institutional and Public Use District
- CCC: Community Commercial Center

In addition to the zones listed above, two new overlay zones are proposed:

1. Pleasant Valley Neighborhood Center Overlay District. This overlay will apply to the land in the southwest quadrant of the intersection of SE Foster Road and SE Hemrich Road.¹

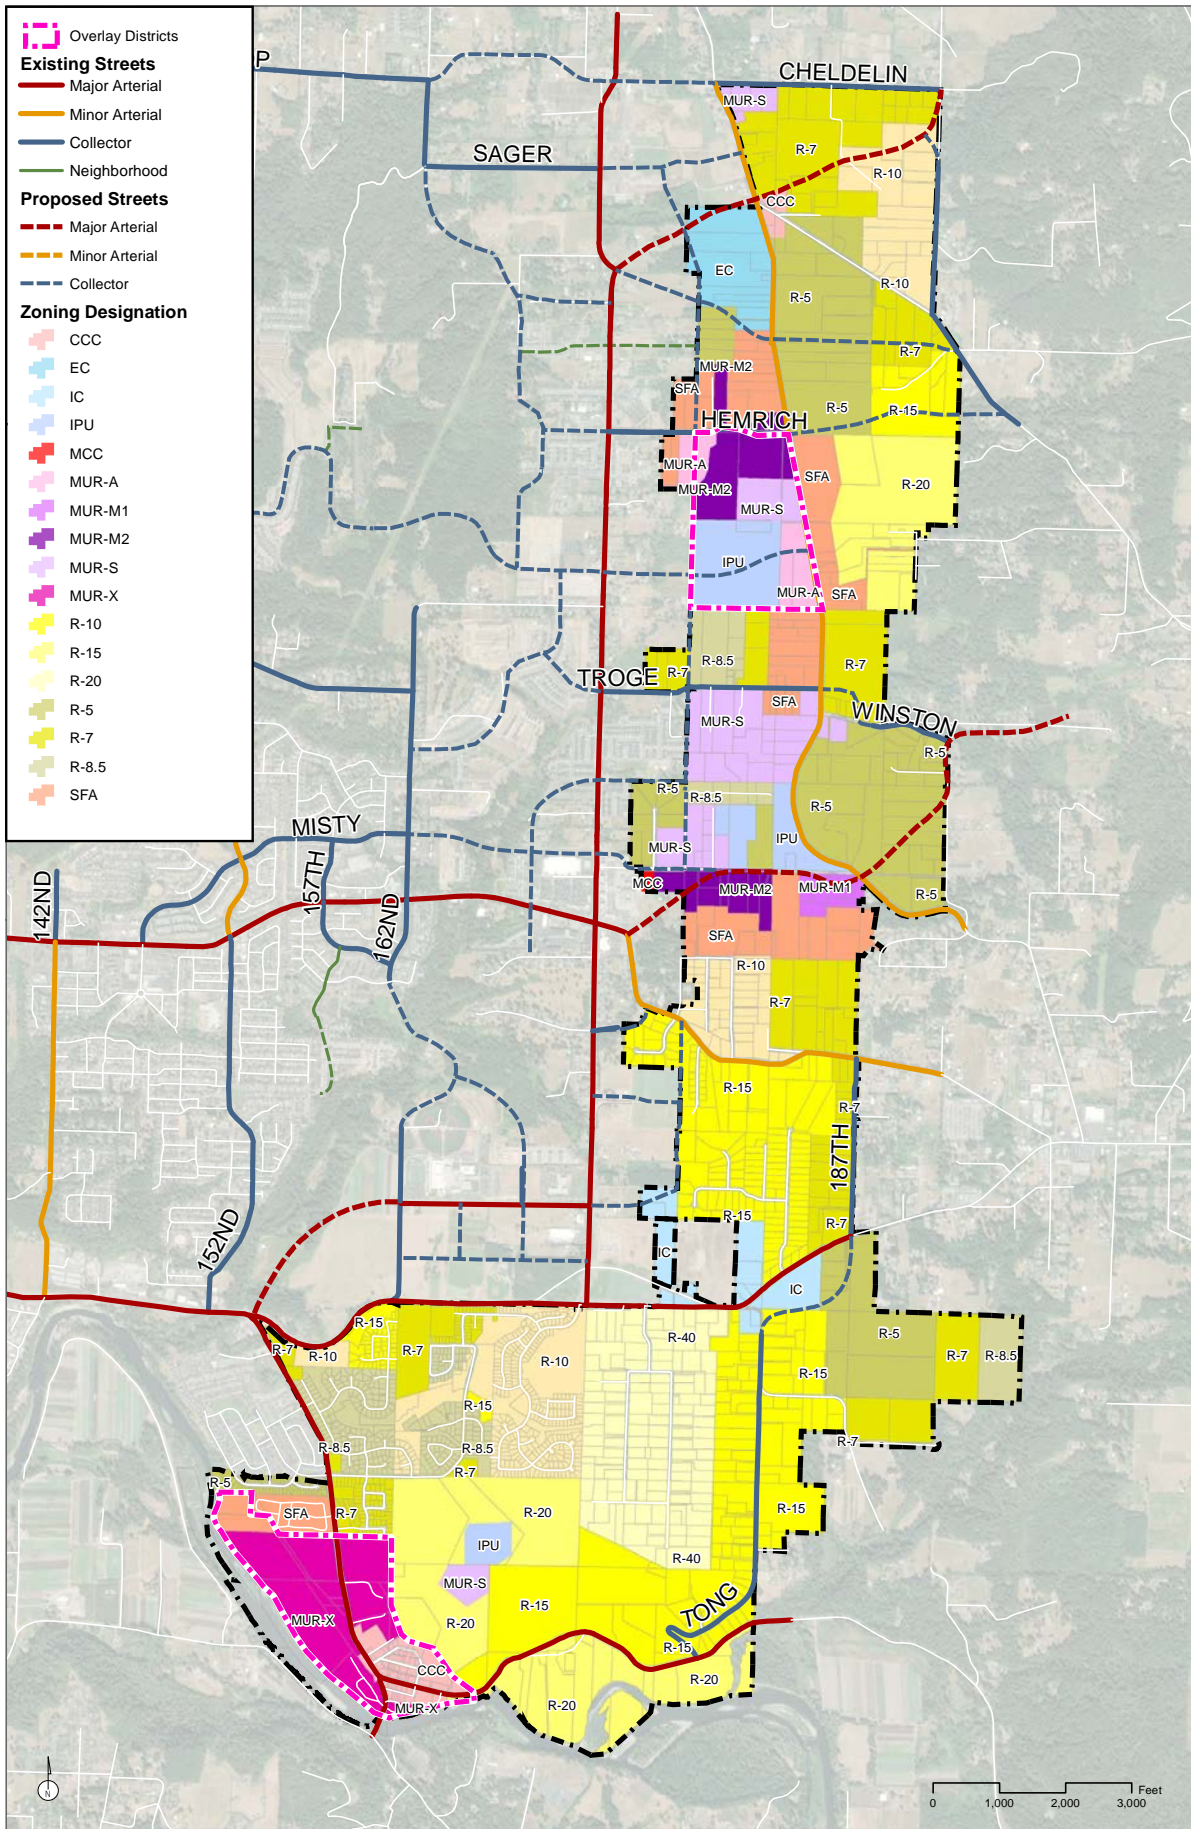

2. Carver Riverfront Overlay District. This overlay will apply to land within the unincorporated community of Carver, as shown on Figure 23. The policy intent of this overlay district is described in Policy LU-7.4 on page 44 of this report.

The estimated developable acreage and capacity of these zones, taking into account environmental constraints, lot size and density regulations, and density transfer provisions of the Happy Valley development code, can be found in Appendix A of this document.

¹ For further descriptions, please see Policy LU-7.3 on page 46 of this report.

Figure 23. Zoning Map

LU-7.1: Overall Policy Framework and Vision for Pleasant Valley/North Carver

The following policies were derived from the vision, guiding principles and plan recommendations developed during the Pleasant Valley/North Carver Comprehensive Plan process (2018-2020). Each policy is made up of its introductory goal-oriented statement, followed by the principles to be used during implementation.

LU-7.2: Pleasant Valley/North Carver Vision and Guiding Policies

The vision for Pleasant Valley/North Carver Comprehensive Plan is that the area will be an integral part of the growing Happy Valley community, and a natural extension of East Happy Valley. The area will be comprised of a network of walkable neighborhoods, vibrant mixed-use centers, and thriving employment areas. The natural beauty of the landscape is embraced, the ecological health of the area is preserved and enhanced through environmental stewardship, and nature is made part of every neighborhood. The Carver riverfront will be transformed to include great public access and unique destinations. The area will be supported by a resilient and safe network of streets, transit service, infrastructure, high-quality schools, and attractive parks and trails. Development and future planning will:

- **Promote a Sense of Community** - Development is planned and designed to create a strong identity and sense of community in Pleasant Valley and North Carver.
- **Preserve and Celebrate Nature** - Nature is protected, celebrated, and integrated into the community. Stream and habitat corridors are

preserved and enhanced to ensure they can provide critical ecological functions. People can experience nature up-close through a network of parks and trails. People can appreciate nature from afar, in everyday situations, through views of rolling hills and forested buttes.

- **Form Walkable, Welcoming Neighborhoods** - Neighborhoods are more than a collection of housing. Neighborhoods feel and function like villages: welcoming communities that make room for people of all ages, abilities, and life experiences. Across the PV/NC plan area, a wide variety of housing options are provided, such as single-family dwellings, attached single-family dwellings and townhomes, compact cottages, apartments and condominiums, and accessory dwelling units. Streets and blocks are designed for walking and local shops and services are within walking distance.
- **Create Vibrant, Mixed-Use Centers** - People gather in the Pleasant Valley Neighborhood Center and Carver Riverfront District to shop, play, and celebrate as a community. Mixed-use buildings allow people to live in these centers, ensuring that streets are alive with activity both during the day and in the evenings. The centers are destinations because they are built around special places, such as the waterfront of the Clackamas River or the confluence of important streets.
- **Craft Distinctive Places** - People perceive the communities in the plan area as distinctive places. Homes and buildings are designed to be varied and interesting. Gateways into the area and individual neighborhoods are marked with distinctive public art or monuments. Unique features are designed into corridors and centers to reinforce a sense of place.

- **Attract Local Jobs and Businesses** - Residents have opportunities to live and work in the same community. Local jobs are available to people with a range of backgrounds and skills and pay a living wage. Businesses are attracted by unique advantages of locating in the area and reinforce the development of industry clusters.
- **Deliver a Resilient, Connected Transportation System** - A robust network of streets and transit routes allow people to move efficiently in, out, and across the area. Streets are designed to both manage traffic flow and encourage walking, biking, and riding transit. Transportation infrastructure is built prior to or concurrent with development.
- **Ensure a Regional Fit** - The area is integrated with the regional transportation system, land use patterns, and public facilities network. The plan area is viewed both as a distinct, individual place and a part of a larger system of neighboring cities and rural areas.
- **Plan for Fiscal Health** - The plan will be implemented because it addresses fiscal realities. Service providers—including transportation, sewer, water, stormwater, parks, schools, and parks—will build infrastructure to support development because funding mechanisms are aligned with needs and costs.

LU-7.3: Pleasant Valley Neighborhood Center

The Pleasant Valley/North Carver Comprehensive Plan identified a new master planned center located southwest of Hemrich Road and Foster Road. The Pleasant Valley Neighborhood Center will include:

- **A new Overlay Zone** that guides the land uses, urban design, public spaces, local circulation, transition between uses and neighboring areas,

community amenities, and other elements needed for a successful Neighborhood Center.

- **The requirements for a master plan** for the Neighborhood Center properties.
- **A mix of low, medium, high density and mixed-use housing**, such as apartments, condominiums, townhomes, triplexes and duplexes, and cottage clusters, as well as single family homes. The master plan will include a well-designed configuration of different housing types and densities, to emphasize variety and avoid concentrations of any particular housing type in any one location.
- **Public parks.** A neighborhood park in the northern portion of the plan will support adjacent residential uses. A potential Community Park south of the future SE Scouter’s Mountain Road extension will provide a signature park serving much of Happy Valley.
- **A network of walkable blocks**, with on-street parking and buildings oriented to streets with ground floors well-designed for pedestrian activity.
- **Safe, direct and convenient street and pedestrian connections** to facilitate easy access to and from adjacent neighborhoods.
- **Connections to the trail network.**
- **“Happy Valley Style”** architectural design.

LU-7.4: Carver Riverfront District

The City’s vision for Carver is for the area to become a river-oriented, mixed-use district with a village-like scale and character that is a both a desirable place to live and an attractive destination for Happy Valley residents and visitors.

The “Carver Riverfront District” will include:

- A new Carver Riverfront District Overlay Zone that guides the land uses, urban design, public spaces, local circulation, connections to the river, transition between uses and neighboring areas, community amenities, and other elements needed for a successful riverfront district.
- Base zoning of: Community Commercial Center zoning in the Carver Junction area; and, Mixed Use Buildings with Residential Emphasis (MUR-X) in the area north of Carver Junction. The uses and standards will be further refined through the new Carver Riverfront District Overlay Zone. Residential development in the MUR-X area is planned to have a maximum density of 24 units per acre, averaged across all residential projects and housing types.
- OR 224 realigned to the base of the bluff. (see Policy T-2.3)
- Small, walkable blocks in the central area of Carver Junction. Land uses in this area will be 1-3 story commercial, residential and mixed uses.
- A connected pattern of new, walkable blocks north of Carver Junction. Land uses in this area will be 2-4 story commercial, residential and mixed uses.
- A signature future riverfront park.
- Mixed-use along the riverfront area that is designed to complement and integrate with public access, trails and the future riverfront park.
- Connections to the trail network.
- Riverfront access, trails and destinations that provide visual and physical public access to the Clackamas River.
- Preservation and enhancement of natural and historic features.

- Planned connections and land use transitions to the residential areas to the north and the bluff.
- “Happy Valley Style” architectural design, with elements that reflect the unique history, village character and riverside setting of Carver.

LU-7.5: Coordination with East Happy Valley Policies

Part of the City’s vision for Pleasant Valley/North Carver is that it is natural extension of East Happy Valley. Toward that end, the following policies, originally adopted for the East Happy Valley Comprehensive Plan, are adopted by reference and apply within the Pleasant Valley/North Carver area:

- LU-4.3: Urban Design
- NE-4.1: Natural Environment
- ED-1.5: Economic Development
- H-2.1: Housing
- PF-2.1: Public Facilities
- T-2.1: Transportation (see also new policies for Pleasant Valley/North Carver)
- U-2.1: Urbanization Policies
- New Transportation Policies for Pleasant Valley/North Carver

LU-7.6: Pleasant Valley Wildlife Corridors

Development shall be sited and designed to, as practicable, preserve wildlife corridors associated with the Rock Creek tributaries that flow through the Pleasant Valley Comprehensive Plan. The two priority tributaries for this policy are located: (1) on the north side of Hemrich Road and its extension; and, (2) on the north side of the Troge-Winston Road corridor.

T-2.2: Foster Parkway

Foster Road, from approximately the 172nd-190th Connector to Vogel Road, will be designed and developed as a “Parkway” street. Foster Parkway is intended to accommodate all modes of travel along a safe and attractive street adjacent to the Pleasant Valley Neighborhood Center and neighborhoods along Foster Road. Per the classification and cross-section adopted in the Transportation System Plan, it will be a three-lane Minor Arterial facility with additional landscaping, a planted median where feasible, and a separated multi-use trail. The section adjacent to the Pleasant Valley Neighborhood Center will have features that support the more active pedestrian-oriented character of the area, as defined by the Pleasant Valley Neighborhood Center Overlay. For example, sidewalks may include trees in tree wells, pedestrian-scale lighting and other pedestrian amenities.

T-2.3: OR 224 Refinement Plan and Realignment in Carver

The City will work with ODOT and others to prepare a refinement plan for OR 224 through Carver. The City’s vision for the Carver Riverfront District includes a realignment of the highway to the east along the

base of the bluff to: (1) create the Carver Riverfront District (see Policy 7.4); and (2) reduce congestion and improve safety at the intersection of OR 224 and Market Road; and, (3) preserve a walkable village core in the heart of the Carver Junction.

ED-1.6: Pleasant Valley/North Carver Employment

Pleasant Valley/North Carver Comprehensive Plan areas will include a diverse range of employment opportunities. Employment lands will provide:

- Reasonable amounts of industrial and employment areas to address the employment needs of those living in the area, as well as contribute to sub-regional needs.
- Employment areas that are served by adequate public facilities and accessible by a full range of transportation modes (i.e., automobile, freight/truck, transit, shared ride, pedestrian and bicycle).
- Community Commercial Center zoning in the Carver Junction area to support a future “Carver Riverfront District” with a mix of uses that allow for a wide range of commercial uses and medium-to-high density housing.
- Employment uses that are integrated with the natural resource qualities of the land, including bluffs, streams/river, agriculture and viewpoints.

Transportation System Plan

As part of the Pleasant Valley/North Carver Comprehensive Plan, amendments were prepared for the City of Happy Valley's Transportation System Plan (TSP). This TSP update incorporates the key elements of the Pleasant Valley/North Carver transportation system, including:

- A new "parkway minor arterial" cross-section to implement the Foster Road Parkway.
- Updated TSP maps that implement the Pleasant Valley/North Carver area Street Network and Bikeways and Trails Network.
- New transportation projects either within the study area or needed to serve the growth in the study area, such as improvements to Highway 212/224 (Project I20) and Highway 224/Springwater Road (Project I21).
- A proposed study area corridor to evaluate the realignment of Highway 224 through Carver.

Parks & Recreation Master Plan

As part of the Pleasant Valley/North Carver Comprehensive Plan, amendments were prepared for the City of Happy Valley's Parks, Recreation, and Open Space plan. Updates include:

- Discussion of the PV/NC area in demographics, population forecasting, and Level of Service calculations
- Discussion of community events conducted as part of the PV/NC Comprehensive Plan
- Objectives related to trails & parks connections within the study area.
- Mapping park acquisition target areas in the PV/NC area.
- PV/NC projects added to the Parks Capital Improvement Plan (CIP).

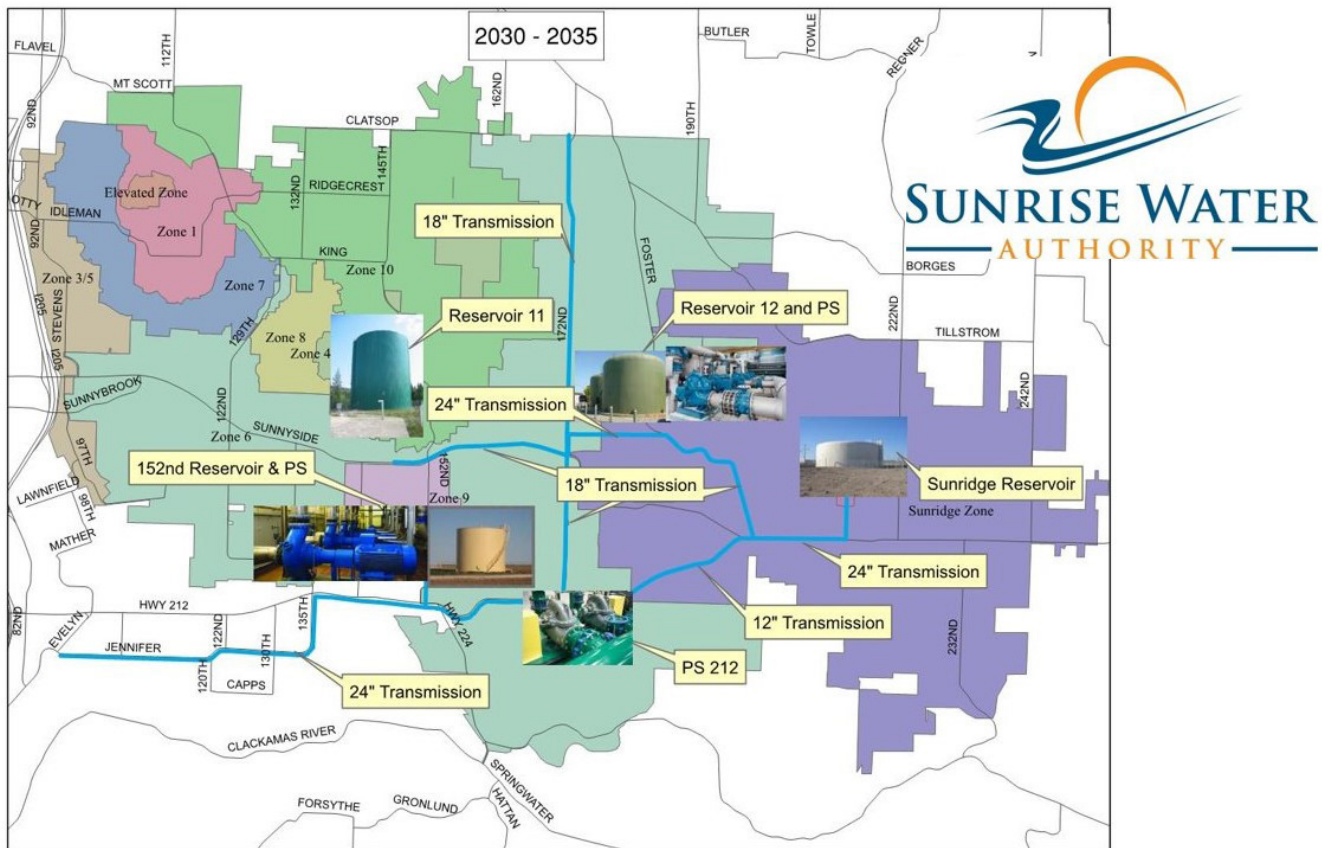

Water Master Plan

Water service for the Pleasant Valley/North Carver area is provided by the Sunrise Water Authority (SWA), whose system provides both urban-level service and rural-level service to the Happy Valley and Damascus areas, respectively.

SWA recently completed a long-range plan identifying improvements needed to serve anticipated growth in its service area through 2035, including new reservoirs, transmission lines, and pump stations. These improvements are expected to be paid by Systems Development Charges (SDCs) as development occurs.

Of particular note for the Pleasant Valley/North Carver area, SWA's gravity-fed system currently serves areas at a ground level elevation of 470 feet or lower, due to the location of existing storage tanks. This means that development above this elevation, which includes portions of the study area in the vicinity of Sunnyside, Highway 212, and the Carver Bluffs, will need to either be phased concurrent with future SWA improvements or help fund water infrastructure themselves.

Figure 24. Sunrise Water Authority Infrastructure Planning

Sanitary Sewer & Stormwater Master Plans

Sewer service for the PV/NC area is provided by Clackamas County Water Environment Services (WES). Sewage is treated at either the Milwaukie facility, which is capped at current levels, or the Tri-City facility, which is expanding to accommodate future growth. Significant new projects to accommodate this growth include the Rock Creek interceptor in the PV/NC area, and the Clackamas Interceptor.

Stormwater within the PV/NC area is also managed by Water Environmental Services (WES). The typical process for stormwater management involves:

- **Standards.** WES sets stormwater design standards for development.
- **Construction.** Development builds stormwater conveyances and site-scale facilities to serve the development.

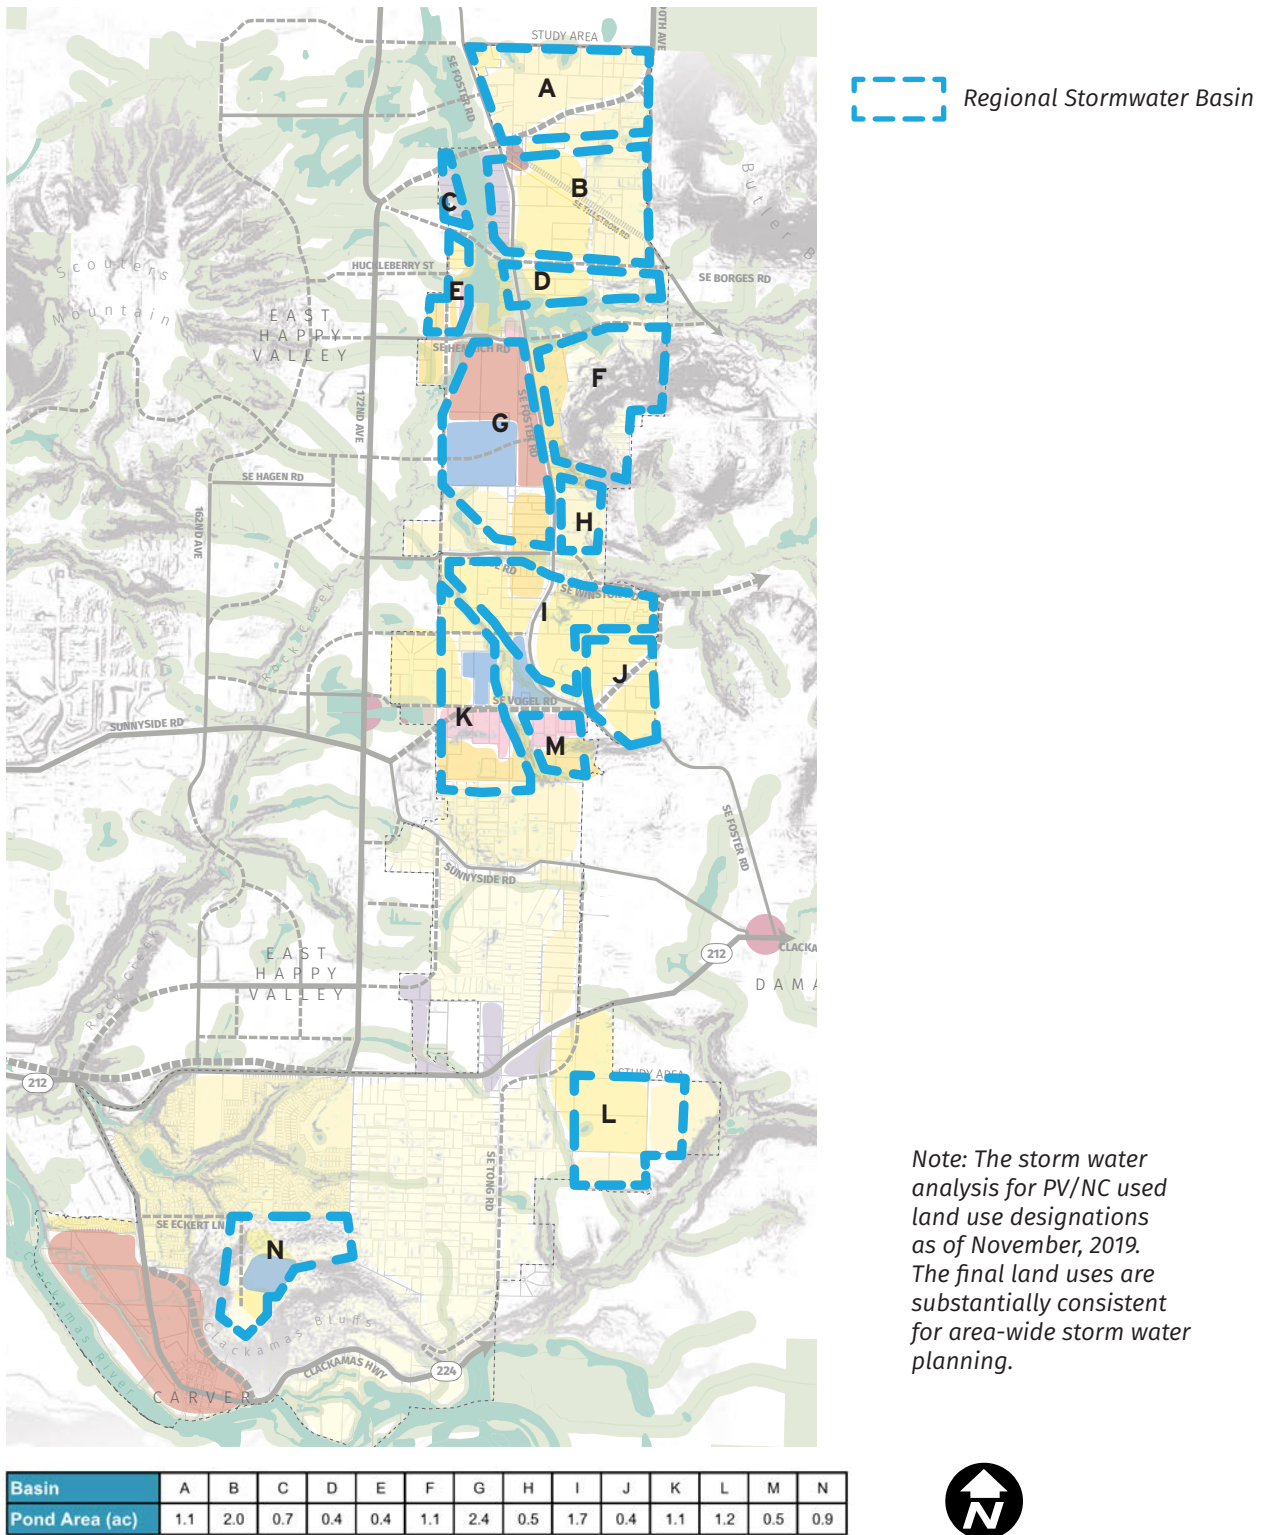

- **Long-Term Responsibility.** WES maintains public storm sewer (public streets & easements). WES maintains public stormwater facilities. Private storm sewer and stormwater facilities are maintained by property owners.

Parallel with the PV/NC Comprehensive Plan, WES prepared a Stormwater Master Plan for the area. The Master Plan recommends regional stormwater facilities where feasible. Regional stormwater facilities serve more than one property, have a lower life-cycle cost, and require less land overall. Using these types of facilities can remove a barrier to development of individual sites that would otherwise have to treat their own stormwater and provide opportunity for an open-space neighborhood amenity. Locations for regional stormwater facilities are shown on Figure 26. The City supports the co-location of stormwater facilities, parks, trails, and open spaces.

Figure 25. Example of Regional Stormwater Facility

MUR-A	45	39	28	15.00	370	12.0	331
MUR-X ²	74	25	18	24.00	211	19.2	337
Total	2,094	1,428	999	--	7,080	--	6,093

Density Transfer/PUD Clustering for Constrained Lands

	Acres Eligible for Density Transfer/Clustering	Density Transfer/Clustering (units/acre)	Units
Land Eligible for Density Transfer ³	510	1	510

Max Density Summary

Total Max Units	7,080
Total Max Units w/ Transfer	7,590
Max Density	7.1
Max Density w/ Transfer	7.6

Minimum Density (80% of Max) Summary

Total Projected Units	6,093
Projected Units w/ Transfer	6,603
Projected Density	6.1
Projected Density w/ Transfer	6.6

Housing Type Summary

SFD Units⁴	3,732
SFD %	49%
MF/SFA Units²	3,858
MF/SFA %	51%

¹ Unit count incorporates proposed 30-acre community park in Pleasant Valley Neighborhood Center area.

² MUR-X identified for Carver area capped at 24 du/ac, and assumes a split of 60% residential uses and 40% employment/commercial uses.

³ Includes undeveloped land within residential zones in Conservation Slopes, Water Quality Resource Areas (75 foot buffer), and Habitat Conservation Areas (High or Moderate Value). No density transfer is assumed for Transition Slope areas. Overall capacity of 1 du/ac estimated across the study area due to limitations in receiving areas.

⁴ Assumes that R-7 through R-40 are 100% single-family detached; R5 and MUR-S are 60% single-family detached/40% multi-family/single-family attached; and other MUR zones are 100% multi-family/single-family attached. Assumes all density transfer units are split 60%/40% between SFD and MF/SFA

Commercial, Employment, and IPU

Land Use	Gross Acres	Unconstrained Acres	Net Buildable Acres	Max Density (units/net acre)	Max Units	Projected Density (80% of max)	Projected Units
CCC ⁵	21	18	13	30	378	24.0	302
EC	44	20	13	--	--	--	--
IC	32	27	18	--	--	--	--
IPU	20	20	14	--	--	--	--
Total	116	85	57	--	378	--	302

⁵ Density and housing unit projections for these zones assume that all zones develop with vertical mixed-use. This is highly unlikely, but it illustrates the maximum residential capacity of the zones. The housing units in these commercial zones should be considered "bonus" units - all the projected housing need must be met in the residential zones.

**Pleasant Valley /
North Carver**
COMPREHENSIVE PLAN
